# Offline3 FastAPI Auth & RBAC API

Generated: 2026-09-28 08:39 UTC

## Project Overview

---

This project provides a FastAPI-based backend for user authentication, role-based access control, project ownership, task assignment, admin management, and soft-delete account behavior.

## Verified Status

---

The project was verified in the current environment with: pytest -q
Result: 1 passed in 2.83s

## Core Features

---

- User registration and login
- JWT-based authentication
- Admin and user roles
- Project creation with ownership checks
- Project member permission control
- Task assignment with authorization rules
- Soft deletion to preserve project/task references
- System limit management for admins

## Repository Notes

---

- .env is required for DB and JWT configuration
- PostgreSQL is used for runtime database settings
- The smoke test validates the RBAC behavior end-to-end
- The project is ready for GitHub documentation and repository sharing
